## COMPLETE CATEGORY OFFERING

### cULus Classified Connections from #8 – 750 MCM on Cu & Dual Rated Lugs & Splices

#### What is UL?

- Underwriters Laboratories (UL) is a third party entity that specializes in safety consulting and safety-related testing and certification in the manufacturing, retail and service industries.

#### Why is UL important in the Electrical Industry as it relates to Crimping?

- UL tests and certifies electrical connections to common standards of safety and reliability across multiple manufacturers and multiple combinations of installation. The electrical connection standards are UL 486A and UL 486B.
- UL has two types of recognitions for these standards: UL Listed and UL Classified.

#### Is there a difference in testing standards between Listed and Classified?

- No. UL only has one set of standards for electrical connections and all electrical connections that are recognized by UL meet these standards.

#### What is the difference between UL Listed and UL Classified?

- UL Listing is only for connector manufacturers and consist of a single branded installation system. (exp: T&B Crimper, T&B Die & T&B Connector)
- UL Classification is given to non-connector manufacturers whose tools meet UL's installation Standards. (Exp: MILWAUKEE® Crimper, MILWAUKEE® Die & Range of Connectors)
- **Because of this, a UL Classified Tool can install a broader range of connectors than a UL Listed tool and at the same standard.**

A single crimp should be centered in the middle of the crimping area. Number of crimps is a minimum. Additional crimps would not negatively affect the integrity of the connection so long as they are uniformly placed between the intended crimp area of the connector, typically outlined with color bands or knurls.
